

PO Box Rental API — one open question

To	Emirates Post PO Box API team
From	7X — NXN conversational assistant
Environment	<code>https://box-stg.emiratespost.ae/services/pobox</code> (staging)
Date	30 August 2026

The rental flow works end to end against staging — availability, hold, order creation. One question remains, plus a few behaviours we'd like confirmed. All of it is from live calls, using the customer's own UAE PASS session token.

The question: two orders on the same outlet

We use **your** N-Genius credentials — outlet `b78ef8c7-ce2a-41d6-84c9-e6219557a991` on staging, `6171b4ce-fed3-4fe1-8390-5b4428403bfc` on production. So the money does reach Emirates Post. The problem is which **order** it lands on.

`Rental/Save` creates its own order and returns a hosted payment page for it:

```
200 OK
{ "payload": {
  "orderNo": "260961742",
  "paymentGateWayResponse": {
    "paymentUrl": "https://paypage.sandbox.ngenius-payments.com/v2?code=...",
    "referenceNumber": "8ce8f91b-c278-4068-b15b-b6a2da48e0ec",
    "niOrderResult": { "outletId": "b78ef8c7-ce2a-41d6-84c9-e6219557a991",
      "state": "STARTED" }
  }
}
```

Our checkout creates a **separate order on that same outlet** and the customer pays that one. So the rental's order is never settled:

```
POST /api/v1/Rental/UpdatePayment/8ce8f91b-c278-4068-b15b-b6a2da48e0ec
200 OK
{ "payload": { "orderNumber": "260961742",
  "isPaymentSuccess": false,
  "paymentStatus": 2,
  "paymentDetails": { "amountPaid": 0.0, "paymentRefNo": null },
  "transactionDetails": { "poBox": "450358" } } }
```

The rental record exists and the box is reserved, but the order is unpaid, so **the box does not appear in the customer's portal**. The payment itself succeeded — it is simply attached to a different order on your outlet.

What we need to know:

1. Should we stop creating our own order, send the customer to the `paymentUrl` that `Rental/Save` returns, and then call `UpdatePayment/{paymentGatewayResponse.referenceNumber}` to complete it? That is our reading of your last reply and it is what we plan to do unless you say otherwise.
2. How long after payment does `isPaymentSuccess` flip? We need to know how long to wait before telling a customer their box is confirmed.
3. Is there any way to attach an existing N-Genius payment to a rental order — useful for reconciling the test payments already made against the orders listed below.

Four behaviours we found by trial — please confirm they're intended

Finding	Why it matters
Select needs <code>uniqueBoxId</code> from <code>FreeBoxes</code> , not <code>boxId</code> . <code>MyBox</code> prefixes it (2450063 for box 450063), <code>MyHome</code> does not (958009 for both), so it cannot be derived. <code>boxId</code> returns 108 BOX_NOT_FREE.	Reads as "someone took it", so we told customers boxes were unavailable when they were free.
<code>paymentProperties.billingDetail</code> is optional in the spec, required in practice — all six fields . Omitted → 400 {"Error":"Error from payment gateway"}. Partial (name + email only) → 400 ... 157 ERROR_GETTING_HOLD_DETAILS.	Neither error names the missing field, and the second points at the hold, which isn't the problem. This cost us a day.
A <code>MyHome</code> address is rejected — 173 MYHOME_ADDDRESSNOT_FOUND — unless <code>myHomeAddress.regionName</code> carries an area code (DXB-84) from <code>masters/locations/api/Regions</code> . <code>regionCode</code> is ignored, and a typed area name never matches.	The area list is on a different service, and the field that takes the code is the one named for the name. Nothing in the spec or the error says so.
<code>UpdatePayment</code> takes <code>paymentGatewayResponse.referenceNumber</code> . <code>niOrderResult.reference</code> — also a UUID, same response — returns 500.	Two UUIDs side by side with nothing to tell them apart.

Working sequence, for reference

Rental/Bundle	<code>request=P</code>	(not <code>EmirateCode</code>)
Rental/BoxLocations	<code>BundleId=IN</code> , <code>EmirateCode=DXB</code>	→ <code>officeId</code> per branch
Rental/FreeBoxes	<code>BundleId=IN</code> , <code>LocationId=<officeId></code>	→ { <code>uniqueBoxId</code> , <code>boxId</code> }
Rental/ExpiryDates	<code>BundleId=IN</code>	→ exact date strings
Rental/Select	<code>bundleId</code> , <code>uniqueBoxId</code> , <code>poBoxExpiryDate</code>	→ <code>subscriptionReferenceNumber</code>
Rental/Save	<code>subscriptionReferenceNumber</code> , <code>totalAmount</code> , <code>userProfile</code> , <code>paymentProperties.billingDetail</code>	

- `poBoxExpiryDate` must be copied **verbatim** from `ExpiryDates`, offset included (2027-08-29T00:00:00+00:00). Recomputing it returns 400 "Invalid date value."
- `LocationId` means two different things: the branch's `officeId` for `MyBox`, the **emirate code** for `MyHome` and `MyHome Instant`. The wrong one returns an empty list, not an error, so every branch looked sold out.
- `LocationId` is the branch's own `officeId`, not `mainOfficeId` — Naif is 214 / 209, and 209 returns an empty list rather than an error.
- `Rental/Save` takes ~17s; `Select` under 1s. Expected?

- FreeBoxes returns 401 with the API key alone — it needs a customer session.

We previously raised 157 ERROR_GETTING_HOLD_DETAILS with you. That was ours — an invented reference, a stale hold, and the partial billingDetail above. No action needed.

Reservations left stranded by testing

Please release if they don't expire on their own — all Dubai:

- **Held, no order:** 378781, 378785, 378790, 378795, 378796, 378797, 379115, 449691, 449949, 449989, 449993, 450000, 450052, 450348 · **987022** (MyHome)
- **Order created, unpaid:** 449922 · 449997 · 450063 · 450152 · 450358 · 450364 · 450294 · 417377 · 417676 — orders 260961732, 260961735, 260961736, 260961739, 260961740, 260961741, 260961742, 260961754, 260961756, 260961757

Happy to walk through it on a call.
